Professional Summary

Motivated B.Tech Computer Science and Engineering student with hands-on experience in full-stack development. Seeking entry-level software development roles to leverage expertise in MERN stack and Flutter for innovative solutions. Proven through hackathon and personal projects, committed to building scalable, user-centric applications in dynamic teams.

Education

Bachelor of Technology in Computer Science and Engineering

Darshan University, Rajkot, Gujarat

Graduation: 2023- 2027

Skills

Programming Languages

- C, Java, Python, JavaScript, HTML, CSS, SQL, NoSQL, Dart

Frameworks & Databases

- React.js, Node.js, Express.js, Next.js, Bootstrap, Flutter
- MongoDB, PostgreSQL, SQLite (Sqflite)

Internship

Software Development Intern

Reliance Industries Limited | April 2025 - May 2025

- Worked on a “Family Data Collection” project focused on gathering, organizing, and managing structured user data.
- Implemented OTP-based authentication to enable secure user login and ensure access control to personal family records.
- Designed workflows allowing users to view and manage only their own family data, enhancing privacy and security.
- Assisted in building and optimizing database structures for efficient storage and retrieval of datasets.
- Collaborated with team members to validate data and improve overall data handling processes.
- Gained practical experience in real-world data management, authentication systems, and enterprise-level workflows.

Projects

C language: Flutter Learning Mobile App

Personal Project | Cross-Platform Mobile Application

- Built an interactive app in Dart/Flutter with PostgreSQL to teach Basic C language and programming
- Enhanced learning with code snippets and real-time UI demos for beginners.
- Prioritized clean, navigable design for better user retention.
- Deployed cross-platform to iOS/Android, honing mobile dev skills.

Student Project Management System

College Project | Full-Stack Web Application

- Integrated NeonDB for scalable and efficient database management of student projects, submissions, and user data.
- Implemented features for project tracking, submission workflows, role-based access (students/admins), and real-time updates.
- Designed a responsive and user-friendly interface to manage coursework, deadlines, and collaboration.

Matrimony Mobile Application

College Project | Cross-Platform Mobile Application

- Created a matchmaking app in Flutter/Dart with SQLite for profile creation and preference-based matching.
- Added features for browsing, filtering, and secure local data handling.
- Ensured smooth cross-platform performance with user-centric UI.
- Addressed real-world needs through efficient, privacy-focused design.

Chat with your PDF

College Project | Deep Learning Application

- Built an intelligent document question-answering system using Retrieval-Augmented Generation (RAG) to enable users to interact with PDF files conversationally.
- Implemented deep learning-based embeddings and semantic search with a vector database for efficient information retrieval.
- Enabled context-aware responses by integrating LLMs with document chunking and indexing pipelines.
- Designed a user-friendly interface for uploading PDFs and querying content in real time.
- Focused on scalability and accuracy through optimized retrieval and response generation techniques.
